

DS-K4DC105 **Automatic Door Closer**

Could protect the door frame and door body (steady closing) to ensure accurate and timely closing after the door is opened.

- Latching speed valve adjustable angle range is 0°~15°
- Closing speed valve adjustable angle range is 15°~180°
- It is recommended that the door closing speed be slightly faster from 180° to 15°, and slow down from 15° to 0°, subject to the door fully closed. To prevent the door from closing too fast and causing the door leaf to collide with the door frame.

▪ Specification

System	
MCBF	1 Million
General	
Working temperature	-30 °C to 50 °C (-22 °F to 122 ° F)

▪ Available Model

DS-K4DC105
